Project Abstract Submission Form

Sec No-8	Team No-5	Project Title- Library Management with RFID Integration
----------	-----------	---

1. Abstract :

The Library Management with RFID Integration project is designed to make library work faster and easier. In a normal library, checking books, issuing and returning books, and keeping track of books can take time and may lead to mistakes. Our project uses RFID technology to identify books quickly and connect this information with a digital library system. The system will allow the librarian to manage books, students, issue and return records, and book availability. RFID readers will be used to read the RFID tags attached to books. The web application will provide a simple interface for managing the library and viewing records. React.js will be used for the frontend, while Node.js and Express will handle the backend. MySQL will be used to store the library data, and the RFID Reader API will connect the RFID device with the application. The main goal is to reduce manual work, improve accuracy, and make book management quicker and more organized.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030031	S. CHARAN TEJA REDDY	
2520030255	V. SAI NIKHIL	

2. Frameworks / Platforms / Software Used

React.js, Node.js, Express, MySQL, RFID Reader API
